SkillSpector Free Download [Mac/Win] [Latest]

SkillSpector is an application designed to offer you a simple and practical way of performing movement tracking and analysis of a video. It offers you the possibility to compare videos by overlaying them and can handle both 2D and 3D sources. With it you can calculate inertia and benefit from a semi-automatic digitizing technique to process your videos much faster. Analyze a video in five steps SkillSpector reduces the entire analysis process

to five simple steps. The first is obviously creating the video capture, choose the digitizing model and calibration profiles, digitize the actual movement and then the calibration which maps the coordinate system and finally, viewing the results of the analysis. A comprehensive interface SkillSpector displays a user-friendly interface which takes from the graphics of the Windows XP days, meaning that it is plain and easy to work with.

All the tools you need are either made available in the toolbars at the top of the main window or they can be accessed from category specific menus. Digitize movement in 2D and 3D To digitize the motion of a person from a video source, you have to record specific reference points and segments of the human body that you want to track. This can be done by drawing the model on each frame, or letting the application use a somewhat intuitive method of figuring out where an already marked point is situated in the next image. This feature considerably speeds up the entire work process and

SkillSpector also offers you a series of settings that you can change in order to further enhance it. Moreover, it also applies to both 2D and 3D tracking but for it to be effective in the latter, it's required that you have a bit of practice with the application. Analyze motion and animate the result

Taking into consideration the above mentioned along with the fact that you can generate center of gravity motion graphs and animations from the connected points, SkillSpector is a very good application for you. Software Player Rating: Rating: Average Would You Recommend This Software?
