Photoshop (or Lightroom) is the most powerful image editing software that you will ever need. It is designed to help you to create high-quality images and modify them in various ways. In this article, we will show you how to replace the standard Windows Explorer with new Photoshop Elements browser (comes with a new Windows 10). Note: Although, for those who know nothing about the subject, Photoshop was originally a media creation program for photo and graphic editing, and it was first released in 1987. Photoshop Elements is a free (paid version for Enterprise and Education users) alternative for basic photo editing. Photoshop Elements has been released in different versions, including the standard (Windows only), Windows 64-bit, macOS, or Linux/Unix (both 32-bit and 64-bit). Before the launch of Photoshop Elements (and Lightroom Classic CC), the programs that you could use for editing photographs were: Adobe Photoshop, Adobe Photoshop Elements (excluding the Elements 13 and later), Apple Aperture, Apple iPhoto, Apple iPhoto for the iPad and iPhone (4.3 or later), or Apple Preview. Photoshop Elements is a program that allows you to do basic tasks. For example, create simple graphics for Web sites or resize, fix, and convert pictures, as well as merge photos. You can use Photoshop Elements for many things: Add your own copyright logos and business information. Create business cards or postcards. Create flyer graphics. Create documents (photographs, web pages, banners, and logos), and send them by mail. Create photo collages, add filters, and crop images. Create 3D models, make a digital matte painting, and publish your photos to a 3D printer. Create a set of photos as a collage. Remove the background from a photo (the photo must be in Photoshop format (PSD) for this). Convert and edit JPEG, TIFF, and GIF files. Join, create, or delete photo books. Organic and conventional potatoes Higher nutrition, lower environmental impact These organic and conventional potatoes were sampled in an agricultural research station. The research was conducted to determine the effect of conventional and organic cultivation on certain chemical and biological characteristics of potato tubers. Dr. Nils Volden, a researcher in organic potato breeding at the Horticulture and Agronomy Research Institute of Wageningen UR, and Anni Sjöholm of Sweden conducted the field trial on the organic and conventional potatoes. They concluded that the organic potatoes were higher in health-promoting factors such as anti-oxidants and contain lower amounts of nitrate (an element that causes bladder cancer). The organic potatoes were higher in glucosinolates, compounds that protect against cancer. The starch in the organic potatoes was more slowly digestible than in the conventional potatoes, which may explain why the studies found that the organic potatoes were higher in nitrate and lower in health-promoting factors. The team of researchers also found that the sugar content of the organic and conventional potatoes was the same, contrary to the beliefs of many people. Organic and conventional potatoes are often thought to be of different quality because they are not grown using pesticides. Ready to fight back? What's New in the Photoshop CC 2015 Version 18?

[What you need to know to start the day: Get New York Today in your inbox.] Hillary Clinton was in the capital for the start of the Senate impeachment trial, and amid a day of drama around President Trump's call with the president of Ukraine — marked by his request that Mr. Zelensky investigate Joe Biden, one of his chief political rivals — Mrs. Clinton's team was poised to bring to the floor the Senate resolution calling for the articles of impeachment. Mrs. Clinton's allies were said to be contemplating a daylong delay, instead leaving the votes on the House-passed articles of impeachment to the Senate. They were concerned about how senators would react to what they feared would be a lengthy debate, and demanded changes in the language of the resolution, including the insertion of a line calling for the Senate trial to be conducted with "the impartiality and dignity it deserves." They were also concerned about fallout from the president's interview on Fox News, in which he declared himself "not under any pressure" to solicit foreign interference in the 2020 election, and he warned that "every president in modern history has done whatever they feel they need to do in order to get re-elected." The immediate problem was that Mrs. Clinton's team felt the House vote on the articles of impeachment, which were approved on a mostly party-line vote, was rushed and undignified. For the president's allies, that was a bad part of the day, and not the biggest problem. The larger problem for the president was the late night interview with Sean Hannity. As Jennifer Palmieri, Mrs. Clinton's communications director, put it, it was "a pretty difficult day — for us." The Food and Drug Administration has granted Fast Track approval to Pfizer's new cholesterol medication, pemafibrate, which could help prevent strokes, heart attacks, and other cardiovascular events. The news: Studies have shown that some statin medications, like Pfizer's Lipid Treatment Assessment and Monitoring Evaluation (LUX-LITE), reduce a person's risk for a stroke and heart attack by 20-30%. Pemafibrate, which is also being tested for help in treating diabetic cardiovascular disease, may be better than statins at lowering cholesterol, and has been shown to be as effective as Lipitor at reducing triglycer
