The PREMIUM Biologist allows you to automatically and reliably solve all types of biological problems associated with the analysis of cell structure, cell shape, cell movement, cell populations, timing and duration of mitosis and meiosis, and evolution. PREMIUM Biologist provides a unique tool to generate many useful data sets that you can use in your research. The program is similar to other image analyzers and quantifiers, but in particular it focuses on the analysis and quantification of cell growth rates and cell types. It provides a possibility to complete the data sets by the automatic detection of additional parameters and the statistical analysis of these parameters. The function of the program is based on the strategy of standardization. The PREMIUM Biologist provides automated, reliable and repeatable measurements and quantifications of nucleus, cell shape, mitosis and meiosis, as well as timing and duration of mitosis and meiosis and mitosis and meiosis duration. It saves time, prevents the need to mark cells manually and provides a lot of other, specific parameters. Data that may be extracted from the analyzed objects include the following: number of mitotic and meiotic cells (including the number of cells in mitosis and meiosis, the mitotic index, the duration of mitosis and meiosis and the duration of mitosis and meiosis in all stages); the number of cells of given populations (such as nucleus and cytoplasm, nucleus and cytoplasm, nucleus and DNA, cytoplasm and DNA, nuclear shape); the position of the nucleus and cell bodies on the monitor; the intensity of staining of different cells; the length, width, area, aspect ratio, form factor, circularity, solidity and circular form factor of cells; the number of DNA fragments and chromatin and the intensity of their staining; the area of the nucleoli; and the number of kinetochores, cells in metaphase, cells in anaphase, cells in prometaphase and cells in telophase. PREMIUM Biologist is quick, flexible and convenient to use. It provides several different functions that are not commonly found in other programs, such as the ability to work with a larger number of images and to choose between more than one series. In addition, you can set the rules for tracking objects based on their color, direction, areas, classes, or you can specify the number of objects to analyze. PREMIUM Biologist has the ability to work in a fully
