## What's New in the SpeechTags?

. Images come with a photo name, a description and date/time. This information can be changed with SpeechTags. The name of the image can be changed with SpeechTags as well. What you can do with the image: 1) You can add a description or comments to the image. 2) You can rename the photo, using the Name button. 3) You can go back one level, by clicking the Back button. 4) You can create an album. 5) You can share that photo and all the information with other people. You can create an album for any image. 6) You can search for any image in the folder. 7) You can sort your photos based on newness, name, description, date or size. 8) You can share your photos with other people. 9) You can add multiple people to the same album. 10) You can delete one or all the photos in an album. Because the folder can contain hundreds of photos, you can remove any unwanted photos easily. 11) You can download any image to your computer. 12) You can also upload any image to Facebook. SpeechTags uses your computer's voice synthesis technology to talk. That means that your computer has to be running Windows 7 or Windows Vista SP1 (or above). SpeechTags will use a microphone. You'll need to have a microphone installed on your computer. SpeechTags allows you to see everything you say, so there is no need to ever have to speak. SpeechTags is available for free (there is no time limit). You can use it on Windows 7, Windows Vista and Windows XP. Unless you've been living in a cave for the past decade, you've probably heard of Facebook. It's all over the news, everywhere you look, on TV and almost everywhere you go. What you might not know is how it gets its data. See more at: As explained in the title: - This is a video about the setting of the camera on my Canon EOS 70D. - I will explain how we use metering modes, spot metering, center-weighted, spot weighted, evaluative and how to set the ISO, Aperture and Shutter speed. - I will show how to get "
