account: Enjoy The existence of biodiversity: a historical perspective. We have entered an era in which the role of biodiversity is receiving increasing attention, both among scientific communities and policy makers. In this paper we trace the historical development of this growing scientific awareness and explain why the quest for diversity should not only be viewed in terms of what has been gained, but also of what has been lost. The disappearance of diversity may have unanticipated negative consequences for our species and their environments. In addition, this loss represents a form of environmental pollution. We argue that it is time for us to pay more attention to the rapidly growing number of species around the globe./**

What's New in the?

Create a new visual style from scratch, or use pre-built styles that you can easily modify to fit your own personal needs. (video: 5:00 min.) Accelerate your designs by using AutoCAD's AutoBox feature, which detects a bounding box around your drawing. Turn it on and activate it with a single keystroke. (video: 7:00 min.) Save time by quickly retrieving the most recently used drawing by using the B10M command.

(video: 3:30 min.) Easily access your favorite drawings by using dynamic shortcuts. (video: 2:00 min.) Today's Review: Today we'll look at several new features that help make life a little easier. As always, feel free to post your thoughts on the comments section below. AutoSnap on Powerpoint When you export a PowerPoint presentation to AutoCAD for editing, you can also activate AutoSnap to help you work more efficiently. As you make changes to your presentation, AutoSnap will suggest the closest AutoCAD drawing to your Powerpoint viewport. You can also use the keyboard shortcut CTRL-ALT-SHIFT-2 to activate AutoSnap. AutoCAD will remember the location of drawings with the same name as your Powerpoint viewport. You can then activate AutoSnap simply by clicking on any drawing with the same name as the current viewport. You can change the location of your Powerpoint viewport by using the Move

Viewport command. Drill to Project Feature Drilling to project is a common feature in AutoCAD. With the Drill to Project command, you can quickly create components of a design, and then combine them to create a finished project. When you use the Drill to Project command, you need to first choose a base drawing that has a component to project. Drill to Project will then suggest all of the components to use to create the finished project. If the component that you want to project is the first component, then you can select it, and simply enter a distance. If the component that you want to project is a later component, then you can enter the distance that you want to project it. You can change the method that is used to define the drilling line. When the user creates the drilling line, they can change to the default line or a custom line. You can choose to automatically
