The U.S. Securities and Exchange Commission (SEC) has added hedge fund billionaire George Soros, founder of the Quantum Fund, to a list of some of the biggest investors of penny stocks. A list that includes the 27-year-old former hedge fund manager, has been compiled by the agency for penny stocks which are worth less than $5.00. The press release released by the SEC clarifies that the names were revealed due to investment sizes of greater than $100 million. The agency's senior deputy inspector general, Lawrence Gibson, stated that there are 2,184 penny stock mutual funds, 1,032 funds on the penny stock list; and 560 funds that invested in penny stocks with a value of over $100 million. Details about penny stocks, defined as securities that carry a price lower than the net asset value of the company, have been focused on the stocks trading at ridiculously low prices. The rates of penny stock stocks' over-the-counter trading have been in focus because of the potential damage they can cause. These stocks have different oddities and their quality is poor. The market forces are big enough to move them to the bottom, but small enough to be displaced by the same forces if another product is better than theirs. However, penny stocks are not always a negative when companies are forced to do something about them. In this case, there is a need to pay attention to the stocks that are trading at a price that is equal to or below their net asset value. If these stocks have a market value of more than $5 million and are important and used by many investors, they should not be brushed aside. At the SEC, the agency has been vigilant in enforcing regulations. Additionally, the agency has provided investors with access to information and warnings about penny stock scams. Furthermore, the SEC's "Operation Burn the Floor" was launched in 2017 to crack down on some of the scams that are carried out by pyramid schemes, penny stock scams and pump and dump.A challenge we face in biomedical informatics is the need to harmonize high quality and massive amounts of data.
