# Gradients One of the most popular tools in Photoshop is the Gradient tool. You can apply a gradient that varies from any color to any color or from any color to any color by using an unlimited number of points. Gradients are the most powerful way to change the look of an image from one color to another, and also to create unique, unusual effects. The Gradient tool is selected in the Toolbox (as shown in Figure 2-1), and you use the following techniques to create gradients (refer to Figure 2-2): \* Drag the mouse over a specific area and press and hold the Shift or Option key. When you release the Shift or Option key, Photoshop creates a selection based on the colors you dragged over. The image becomes the active layer. \* Click the gradient-like button in the upper-right corner of the Gradient tool palette to see the Gradient

Q: How do I enable (and disable) "Restart when Internet connection changes" on Windows 7? How do I enable (and disable) "Restart when Internet connection changes" on Windows 7? Googling "restart when internet connection changes" doesn't give me the information I want; I'm quite sure I haven't said something weird but I want to know exactly what that option is. A: In Windows 7, in the Actions (or Context) menu, when you choose Restart: Choose how long you want to wait before restarting. The image below is from a pretty old version of Windows 7 I used to run (vista) and you can see the options "Never" and "Restart immediately" This can be assigned a keyboard shortcut: Windows 7 Keyboard shortcuts For the other options, you need to edit the registry (details below) and here's an article from Microsoft that does a nice job of explaining the process: How to Disable the Restart Window in Windows 7 It's pretty simple -- when you edit the registry values via the above article, you can then navigate to the key HKLM\SOFTWARE\Microsoft\Windows\CurrentVersion\Policies\System and edit the "ShutdownType" key. In the example below, there's a value of "Restart" and a value of "" (or blank), simply change the value to something else, such as "None". If this doesn't work, there's also a hack here that involves making the registry value "NotRestart" -- again, there's another value "Restart" that can be edited. Q: How do I create a button outside and inside of a form? How do I create a button that isn't inside the form? I want it to be outside of the form. A: Try this, it will work Left 1.5 inches Centered 2.5 inches

## What's New In?

If you want to paint with Photoshop, you can use the Eraser tool. You can use it to selectively erase pixels from images. Backgrounds are commonly added to images by simply inserting a new layer between the ones containing the image and the rest of the image. The Crop tool allows you to divide an image into smaller pieces to give it a different look, without having to actually crop the image. Convert to Grayscale, adjust color, contrast, brightness, and so on, are common operations. The Direct Selection tool allows you to click on individual pixels or to drag a selection from one area to another. If you don't know where to start, here are some basic operations that you can quickly perform to get your work done. For a thorough review, see the Photoshop Help documentation. Making Use of Layer Filters Most of the time, you should create layers for every area that you want to work on. You can use layer masking to selectively hide or show areas on a layer. Create a New Layer You can create a new layer by using the New Layer button on your Photoshop toolbox. Layers can be used to do different things in your images, including enhance your images, add special effects, fill in part of an image, or keep parts of an image hidden. In your Photoshop toolbox, you will see a new button called New Layer. Click on the New Layer button, and Photoshop will give you a warning that you cannot use it. It's not a setting on your PC, it's a warning from Photoshop itself. Click OK to create a new layer. To create a new layer, simply right-click on an empty area of your canvas, and select New Layer. Right-clicking on an empty area of your canvas means that you want to create a new layer in the Photoshop file. You should not accidentally create a new layer on the Background layer. Layers and the Paint Bucket Tool Layers are like "buckets" into which Photoshop paints your image. When you create a new layer, Photoshop gives you a small Paint Bucket icon for your new layer. If you have a large, complex image, it may be difficult to see your new layer if it's on top of the background. There are two ways to fix this problem: Select your entire image. Select a smaller portion of your image that you want to use for your new layer.
