oddly enough, perhaps it has been more than a year since eddie kramer has updated his “het” filter family, but he has finally taken the time to release an official update. the new version of the “het” family is now called “het 2” and it supports high-quality 24-bit/96-khz data, making them perfect for working with modern-day recording and mixing gear. also, if you’re working with a bit depth of 16-bit/44.1-khz, you can still use them, but they will work on a lower quality setting. this is great for workflow-driven setups that may not be able to support the higher bit depth, as well as those who simply want to make use of the newer technology that is available. the new het filters are available for immediate purchase as a bundle with the “het vst bundle” – a collection of four of the best eddie kramer filters – the zebra, bee, elephant, and tiger. the bundle is available for \$49.95, which includes a 30-day trial version of the eddie kramer het vst bundle, as well as all four filters at their original retail price. if you decide to purchase the eddie kramer het vst bundle after the trial, it will be charged to your credit card. to learn more about the bundle, head on over to the eddie kramer het vst bundle product page. also, if you’re interested in the “het” filters in general, head over to the eddie kramer het vst bundle product page and check out the filters individually. the eddie kramer het vst bundle is available for immediate purchase on the eddie kramer website for \$49.95. it includes a 30-day trial version of the product, all four of the eddie kramer het filters, and a free taks hosted installation package. when you purchase the bundle, you will be charged to your credit card.

ssl preamp eddie kramer on ssl preamp: i wanted a preamp that would sound great on low-impedance or unbalanced headphones and speakers. it's a preamp that's optimized for vocals, acoustic guitars, and other sources of midrange. it also does a good job with rock, country, and other high-impedance instruments. ssl g-eq - neutral eddie kramer on ssl g-eq - neutral: this setting is good for rock, hard rock, and other sources of heavy midrange. it gives a full sound with a prominent, but not overbearing midrange. ssl g-eq - warm eddie kramer on ssl g-eq - warm: this setting is good for vocals, acoustic guitars, and other sources of light midrange. it gives a very natural sound that sounds good on a variety of sources. ssl compressor eddie kramer on ssl compressor: i wanted a compressor that would enhance the dynamics of the source and compress the rest of the midrange. this setting does a good job on vocals, acoustic guitars, and other sources of midrange. ssl compressor - neutrally compressed eddie kramer on ssl compressor - neutrally compressed: this setting is good for vocals, acoustic guitars, and other sources of midrange. it gives a full sound with a prominent, but not overbearing, midrange. the eddie kramer - channeleddie kramer on the guitar channel:the guitar channel plug-in features settings for lead guitars and two types of rhythm guitars. when it comes to lead guitar, i want it to become a living, breathing organism, creating a palpable sense of excitement within in the mix. by combining the right amounts of eq, compression, delay, reverb, and a touch of flange, these 5 elements, working together, make it come alive. for rhythm guitar, i try to get it in your face as much as possible, without over-processing the sound with eq. by adjusting the amount of compression, and not overdoing the amount of space, i make sure that the guitar stays up front, where it belongs. 5ec8ef588b
